

FINOPS

Optimize your Cloud assets and control your costs

Almond's FinOps approach allows you to **control your Cloud costs by maximizing the performance of your IS.**

An analytical approach to meet the following challenges:

- What are the main items of expenditure?
- Are the costs in line with market prices?
- What are the areas of optimization and possible negotiation tracks?
- How to fully exploit the Public Cloud model and perpetuate the FinOps approach?

OUR OFFER

UNDERSTANDING YOUR EXPENSES

- **Analysis of contracts**, service catalogs and invoices
- Presentation of global **consumption**, by service, resource, project, subscription and Top 5 cost centers

ANALYSIS & BENCHMARKING

- **Benchmark** based on Almond repositories : **hosting, VMs, storage, licenses, outsourcing**
- Identification of **financial anomalies in terms of governance** (naming rules, location of resources, tagging, rights management, etc.) **and operational** (VM to reserve, to resize, unused resources, architecture to optimize, services to downgrade, automation, etc.)

OPTIMISATION & ACTION PLAN

- Identification of **optimization and negotiation levers**
- Formalization of **recommendations and actions to be taken**
- Qualification of the **effort to be provided** and the **benefits** of each recommendation
- Implementation of **FinOps governance**, definition and monitoring of KPIs

THE BENEFITS

01 ■ Control your current expenses.

02 ■ Identify your financial anomalies.

03 ■ Get quick optimization levers and exploit the Public Cloud model in the long term.

OUR VALUE PROPOSITION

 Cloud Gouvernance.

 Optimization of Cloud architectures.

 Financial modeling & IT benchmarking.
