

OFFICE 365: TEAMS ET SECURITY

Leveraging the capabilities of the Office 365 digital hub without compromising on security

Control your risks by developing your governance, organization and practices around **Microsoft Teams**.

A global approach to address the following issues:

- What new risks does the use of the Teams collaborative hub generate?
- How to adapt security policies to the use of Teams?
- What are the best practices to adopt to secure the use of Teams?
- How to transform the user into a key actor of the security?

OUR OFFER

ASSESSMENT

- Understand the organization, the activities and the regulatory context in which you use the Microsoft Teams collaboration hub.
- Identify the gaps between your security requirements, your policies and uses of Teams.

GOVERNANCE & ORGANIZATION

- Establish a security action plan adapted to your organization and the regulations that apply.
- Define security policies that converge your challenges and the specificities of Teams (administration, access management, data protection, etc.).
- Control the opening of your information system to your customers and partners through Teams.

PRACTICES

- Raise awareness and support users in the evolution of practices to place them at the heart of the Teams security process.
- Write usage charters for the Office 365 collaborative hub for your employees and third parties.

THE BENEFITS

01 ■ Have a customized security plan.

02 ■ Make Teams a lever for improving your cybersecurity.

03 ■ Making the user a strong link in cloud security.

OUR VALUE PROPOSITION

 Governance and cybersecurity organization.

 Awareness and change management.

 Support in monitoring and implementing the action plan.
