Almond

SECURITY FOR EXTENDED ORGANIZATIONS

Assessing and improving your information security across system boundaries

An approach that enables you to identify risks in your ecosystem and improve the security of your information system beyond what you directly control.

An analytical approach to meet the following challenges:

→ How to map and control your ecosystem (Cloud, SAAS, flux, ...)?

→ What is the current security level of your service providers? Of your subsidiaries?

→ What are your critical vulnerabilities? Where are the weak links?

→ What actions should be taken in priority to strengthen your security / that of your ecosystem?

→ How to measure the effectiveness of the implementation of action plans?

OUR OFFER

MAPPING	AUDITING AND EVALUATING	TRACKING AND MONITORING
→ **Mapping of your organization's ecosystem and your third parties** (suppliers, subcontractors, subsidiaries and participations) based on pragmatic methodologies opening the way to monitoring and controlling the associated risks. → **The finesse and depth of the mapping will be adjusted** according to its intended use (i.e. long-term monitoring of internal suppliers vs. mapping of a target for a one-time assessment).	→ Control of the security level on the study perimeter thanks to **functional and technical audits** integrating security maturity, compliance with a reference system, and a study of cyber risks. These audits can also cover physical and **environmental security, architectures and configurations**. → Conduct **exposed security assessments** of your organization or a third party based on automated testing performed by our **Security Rating** solution.	→ **Supervision of third-party risks** over time. → Proposal of **quick wins** and more complex measures to the client at the end of the audits. → **Support for the change** induced by the application of audit recommendations. → Follow-up of the action plan and **reevaluation of the cybersecurity maturity score** using the Security Rating tool. → Collection and analysis of **evidence.**

THE BENEFITS

01. Industrialize your security assessments.

02. Control your risks, your compliance and your security.

03. Generate operational and financial gains.

OUR VALUE PROPOSITION

Support for multiple audit frameworks.

Modular and customizable tooling including evidence collection.

Post-audit follow-up & service center supervision.
